

Acme Corp — Weekly Performance Report

Jun 23, 2026 – Jun 29, 2026 | Prepared by Single Grain

Summary

This week, Acme Corp saw a 5.3% increase in revenue, reaching \$20,110, while spend decreased by 1.6% to \$4,750. This improvement in revenue, combined with reduced spend, resulted in a higher overall return on ad spend (ROAS), a metric that measures the revenue generated by each dollar spent on advertising, increasing to 4.23x from 3.96x in the previous period.

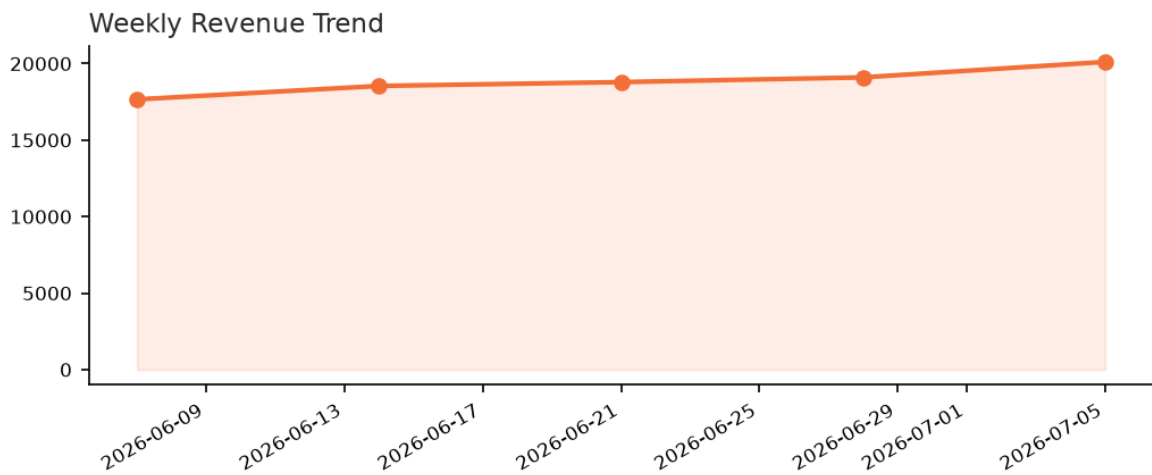

Several channels are driving this growth, with Organic SEO showing the largest revenue increase of 10.0% compared to the previous period. This suggests that our search engine optimization efforts, which involve improving the visibility and ranking of Acme Corp's website in search engine results, are paying off. LinkedIn Ads also performed well, with a ROAS of 4.57x, indicating a strong return on investment for this channel. Google Ads and Meta Ads, while still generating significant revenue, had lower ROAS compared to LinkedIn Ads, with 3.65x and 3.10x, respectively.

One area that requires attention is Meta Ads, which had the smallest revenue increase of 0.6% compared to the previous period. As a hypothesis, this could be due to increased competition on the Meta platform, which may be driving up costs and reducing the effectiveness of our ads. To address this, our next step will be to review and optimize our Meta Ads campaign, potentially adjusting targeting, ad creative, or bidding strategies to improve performance and increase revenue growth.

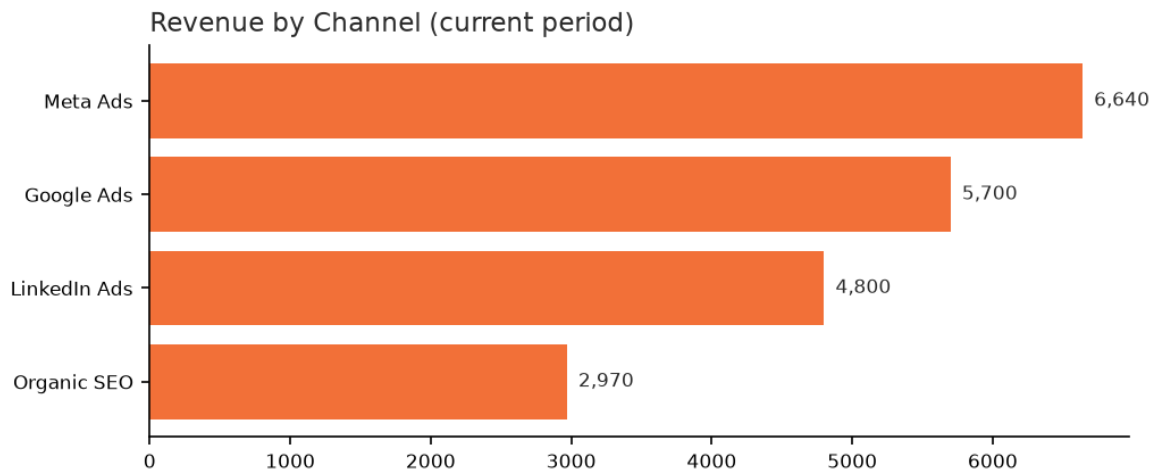

Key Metrics

Metric	This Period	Previous Period	Change
Spend	4,750	4,825	-1.6%
Revenue	20,110	19,100	+5.3%
Conversions	160	154	+3.9%
ROAS	4.23x	3.96x	+7.0%

Trend

Performance by Channel

Channel	Revenue	Spend	ROAS	CPA	Conversions
Meta Ads	6,640	2,140	3.10x	35	62
Google Ads	5,700	1,560	3.65x	29	53
LinkedIn Ads	4,800	1,050	4.57x	88	12
Organic SEO	2,970	0	0.00x	n/a	33
